Smartphone support for a Tesla Model S/X. Mounts with the screws available in the car. Similar to the dock available on the Tesla website. Simple cable management. Not for iPhone max models. Add supports to your liking. Standard slicer suggestions for supports work fine. Phone dims 72mm wide and 9mm thick. Added .gcode file is for Prusa mini with PETG and 0.2mm, result is the attached photo. PLA provides a nicer result, but has deforming issues when the cars sits in the summer sun too long.
