I wanted a larger **version of this** but couldnt make a bigger diameter one as I didnt have a big enough build plate, so I made it wider, about 4 times wider.

It currently has 500ft of 200lb line on it.

The triangle holes in the side are there because I printed it using a 0.8mm nozzle and the walls of the model are too thin, causes no issues though as the holes are so small.

I split it into 3 parts in Tinkercad and just extended the middle.
