---

I tried some of the other kickstands on here and they wouldn't fit my case (too wide) so I made another one (The case is a Tough armour)

The normal version clicks into place nicely, the short version stays in with just friction(mostly)

I made the short version to put the phone at a better angle, it is not very stable unfortunately (mainly when touching in the top left corner of the phone, although that shouldn't be an issue as you probably won't be touching it much)

Update - 11th Nov 18: One of the pins on the kickstand broke off after continued use for over two months, making them longer or fatter might fix this, I might experiment with this at a later date

Update - 16th Feb 2019: My kickstand fell out so I took the opportunity to make the pins longer, they are now closer to the original kickstands width, should make it less likely to fall out.

## Print Settings

### Supports:

No

### Resolution:

0.2

### Infill:

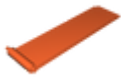

I used 50% although im not sure how much difference it makes

### Notes:

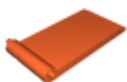

It looks so weird in the pics because I need to work on getting a smoother bottom surface (Printer issue)

Category: Mobile Phone
