### Summary

Keychain that will help with installation and removal of a square, brass drain plug on many boats.

---

A simple keychain/wrench for use with square, brass garbord drain plugs. These plugs are not meant to be installed tightly, so if you need more force than a plastic wrench can provide, you're probably overdoing it.

I've tested these with 5 parameters to increase strength and just a normal 20% infill. Will float with a key attached. I typically leave my plug in the wrench when it's not in the boat as a reminder that I should put it in before trying to put the boat in the water.
