This design is a 4 piece print that allows you to sandwich heavy duty foil in-between the inner and outer layers which effectively creates a faraday cage and blocks the tracking signal being sent out.

If you ever have a reason to “go off grid” or at least stop certain devices from being tracked temporarily, this print is for you.

Faraday cages require full enclosure of metal around a device. If the foil rips, or doesn't fully surround the pieces it will not work.

Video of how to place the aluminum foil.

Have Fun!
