This is a mount that I made for a project I was working on. It is not meant to be used as a stand-alone model, but to add to your existing project. It allows you to easily add one of these battery charging modules to your project, and have the USB port exposed outside of the shell.

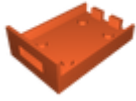

Here is a link to the particular charging module I purchased (but there are a ton around in the same form factor of 17mm x 27mm)
