This is a replacement for the rubber grommets found under the seat of Textron / Arctic Cat Prowler side-by-side UTVs. In my case, a 2018. It was created to solve the problem of the rubber grommet popping out and being lost, and it being such a pain to have to order these in when I need them.

This is an accurate replacement part, and when printed with TPU, it's a good replacement. The hard part is getting it to fit in the hole it is supposed to.

I may have to create a second model that will allow for easier insertion, as I always seem to "rip" through the print when I try to get it inserted in it's proper place (because I usually have to try and jam it with a screwdriver. Next time I print one, I will make an easier to insert version, or perhaps

one with a better design that will keep it from popping out, and getting lost.

This model is for a replacement of part number 0423-678
