I was getting frustrated that I couldn't find a backplate for my 5 year old video card, so I said to hell with it and made my own. I made this for my EVGA 780 Ti video card, but this ought to work with the 780, 980/980 Ti, and Titan models (I believe). I intend to convert this into a vector image and cut it out of one solid piece of acrylic, but wanted to see how it would look and fit before wasting the acrylic. I intend on making a blank one, should anyone want to customize their own and so forth.

I chopped it into two pieces to print on my Anet A8's and have included the files for anyone who would like them. Far as I can tell, all the screw holes and mounts line up beautifully. You're going to need new screws for mounting, as the ones on the GPU aren't long enough. Thank you!

### Print Settings

#### Printer:

Anet A8

#### Rafts:

No

**Supports:**

No

**Resolution:**

.2

**Infill:**

25

Category: Computer
