I own a Traeger Pro 575 Smoker. I've had ongoing issues with mice sneaking into the smoker at night and making a mess. I suspect many other people have the same issue but haven't realized it yet. Key signs are small black pellets on the drip tray and on other areas within the smoker. The mice are basically crawling in via the smokestack and/or via the grease drip spout in search of food. I designed two separate covers to block both points of entry. I am recommending that the covers be printed with PETG (for durability) and bright orange is the best color to remind you to remove the covers before using the grill. I designed the covers from scratch using Shapr3D. I have a Traeger Pro 575 but these covers will also work on a Traeger Pro 780. I suspect the covers will also work on a Traeger

Pro 20 and Traeger Pro 34 but I haven't tested the covers on these older models.
