Summary

Customizer model of the SIMP kit from Geckhack for plateless keeb.

[Gadgets](#) > [Computers](#)

Tags: [keeb](#) [keyboard](#) [simp](#) [plateless](#)

Customizer model of the SIMP kit from Geckhack. This allows you to get a custom grommet following their directions for measurements. If you open the customizer you'll have the (4) variables to adjust. This will automatically move the rounded edges based on input values.

Test print to come

For values 1mm or less, the rounded portions may appear slightly wonky.

Here's the OG source <https://geekhack.org/index.php?topic=111539>

Printed with Prusa 0.25 nozzle profile, 0.1 layer height, 100% infill, generic flex.
