### Summary

Heavy duty holder that can be used as both a simple keychain/lanyard holder or as strap mount

I didn't want to depend on 'snapping' an airtag in a holder so I made this model that needs to be screwed together. No chance of the airtag falling out accidentally.

The two different parts can be combined to either make a holder with a single loop for attaching to keychains or lanyards or with two loops for strap mounts.

- Print without supports, flat on its side.
- Layer heights of 0.2 and 0.15mm should be fine.
- To make it extra sturdy I would advise 6 perimeters (for 0.4mm nozzle), 100% infill. That way the loop will only consist of perimeters, giving it the best possible strength.

To attach the two halves you need

- 2x m2 nut
- 2x m2 8mm bolt
