Summary

In order to save on filament to build farscape's MLP I created a set of skins which are applied to a wooden box.

In order to save on filament to build farscape's MLP I created a set of skins which once printed are applied to a wooden box.

Original model can be found here. <https://www.thingiverse.com/thing:911891>

These skins are sized to fit 220x220 build plates. Details were also added to various places on the skin panels. I did not edit the original vertical columns which are not spaced to scale so some compromises were made with the additional side details I added.

The Support Interfaces are my original design and can be d/led as a separate model found under my profile.
