Summary

Changes the thumb position of the ePF-1 accelerator.

[Hobby & Makers](#) > [Mechanical Parts](#)

I was unhappy with the thumb position of the ePF-1 accelerator. Holding it in all the time makes my hand joint hurt. This extension aims to change the thumb position a bit to alter the angle the hand is at.

Simply slides over the accelerator. Mirror for brake handle. This is a non-permanent mod to the scooter, should you have to turn it in for warranty or if the mod is not accepted by local authorities.
