### Summary

A tray for storing tools or random small parts for temporary storage.

Tags: [storage](#) [tool](#) [tray](#)

I made this box to hold a bunch of loose/ small items as well as tools. All the corners are rounded which helps to prevent peeling when printing and makes it look a lot nicer.

It took me about 14-15 hours to print however I was using new settings as there are some imperfections in the finished print however the model itself is completely fine.

The model itself is 190mm by 190mm so it is a perfect square.

Any questions feel free to ask and I'll try to respond and help.
