Summary

Holder for your crowfoot wrenches, 10-19mm

Tags: [wrench](#) [holder](#) [ratchet](#) [crowfoot](#) [crowsfoot](#)

I modeled this wrench holder to hold my set of 10-19mm [GearWrench Crowfoot Wrenches](#). It is based on an existing design from Thingiverse, but re-modeled to fit the GearWrench set as well as for easier printing.

Tolerances are pretty tight as I didn't want them to rattle or flop around. I'd recommend ensuring your printer can accurately recreate an interior hole to $\pm 0.1\text{mm}$ or better.

Recommended print settings:

- PETG or ABS unless storing in a climate controlled area
- 0.2mm layer height
- 3-4 perimeters
- 15-25% infill. A little more infill will make it a little less twisty
- 4-6 top/bottom layers
