I have a pineapple core tool. There is a small part that goes into the handle to keep the core-er attached to the handle and to make it easy to take off the handle so you can remove the cored part of the pineapple.

It broke.

I modeled it several times and I was able to hear to beautiful snap when I tried it out. First successfully modeled kitchen fix. (In the picture, it is the furthest one down.)

In case you are wondering, this piece does not touch food nor is it meant to touch food, just the plastic handle.
