When these old Star Wars di-cast ships turn up, they are usually in pretty rough shape. The X-Wing never has it's canopy and is almost always missing some quad lasers.

There aren't really any holes for the canopy to clip into. Which is probably why it's always missing. This canopy will stay in place well enough for display purposes. A nice clear filament and a layer height of 0.1mm looks great.

Getting the quad lasers to stay put will require some fine tuning depending on you machine. Using a tiny sliver of electical tape can make a good soft wedge.

The base will support the X-wing with the S-foils in attack position.

(base is remixed from <https://www.thingiverse.com/thing:2964476>)
