Warning, FDM prints are susceptible to bacteria growth. Use at own risk! [More information about food safety](#).

This was printed at 60mm/s with 10% infill. All the parts together take around 5 hours of printing on the Cr-10s. Support is only needed for the Cap which i recommend you flip over before printing to achieve a better surface quality.

Snuff Box is designed for Swedish Snuff. I designed this on Onshape.com.
