hello everyone,

I created this dust filter for the mk3s+, it can be easily mounted in place of the infrared sensor cover, it is equipped with the cap that unscrews to be able to put a piece of sponge to clean the impurities of the filament.

I made 2 test prints and it didn't give me any problems.

Only fits on the mk3s +.

I printed it in petg.

It does not require supports. I
board of
add the brim to the cylinder

use the same screw with which you fix the original plate
