My version of case, for this fantastic little portable transceiver.

Built-in foldable stand, 2 parts deisgne, no glue needed.

When assembling drop in control buttons, then insert VFO button in top part opening, press fit PCB, after that simply add bottom part.

Added a protection plate groove for lcd on top part, to add some acrylic protector.

Print LCD opening on hotbed, support needed only for controls portion of the top side.

Donations for new trx are more than welcome [via paypal](#)
