Summary

Simple featherboard for a router table to keep work pressed against a surface - larger adjustment for bigger stock

[Hobby & Makers](#) > [Tools](#)

Tags: [router](#) [woodworking](#) [woodworkingtools](#)

Wanted a simple featherboard for my workbench router with a a useful amount of adjustment for wider pieces of stock.

Fusion 360 files included (but it can get messy when resizing.)

I added slots for M4 hardware for use on the flat surface of my router table - for the Fence, I would probably just clamp in place.

The hexagon hole is to allow easy hanging.

Printed in PETG at 0.3 with 20% infill.
