Summary

Shelf with side walls and removable top for Rivian center console

[Hobby & Makers](#) > [Automotive](#)

This is a simple shelf for the deep center console/armrest storage area for a Rivian R1T (I assume it would also fit an R1S). The space is deep enough that I divided it into two areas. The print includes a shelf and a base/support. These are both just a little small for the space because I wanted them to fit through the armrest opening without scratching things (whether when installing or when opening the top/shelf).

There is a small lip on the lid to help prevent things from sliding off the back, but if you print it without that lip, you can do so without supports. Otherwise, you'll need supports for the lid alone, but they're relatively minor if you print it the right way. Because the sides are so tall, it may make sense to have some sort of adhesion aid.

Update: I added a flat top without the lip (helps keep things from sliding off the back). I also added a flat top that is a little shorter for those who would like to keep more papers in the Rivian's manual strap. You should be able to print either of these without supports.
