I blew up my Life Savers candy based magnet fidget design just enough to fit on a Prusa Mini bed, then hollowed it out and added a locking mechanism and dividers to act as a secure storage container, suitable for small parts, or whatever!

HUGE update to this model. I've gotten rid of the threads and now use a twist-lock lid. I've also changed a lot of the geometry so that there is much less need for supports. Pretty much only the center of the top piece needs to be supported. I chose to keep the center of the lid up high so that each compartment has more usable space (taller walls all around).

The print turned out great, so I uploaded gcode for both parts for some popular printers. If I haven't done your printer, just grab the 3mf or stl files and slice it yourself. I'd love to see some makes posted!

Note that the lid is the same between the open version and divided version, in case you decided you wanted one after printing the other. You need only print the bottom!
