I designed this deep sea diver helmet from scratch on Shapr3D. It is not an exact copy of any particular helmet but elements taken from several different ones. It is a detailed model and best printed on an SLA (resin printer). Could be printed on a filament printer if scale is big enough.

5 files for the 5 different parts. Can be assembled as just the helmet or with the stand and can also have the spooky skull inside if desired. The collar sits on top of the stand and its rim engages in the groove between the helmet and the breastplate .

The skull is best printed hollow and at a 30 degree angle. I have allowed a generous tolerance for the joints so should assemble easily, will need gluing once painted.

I have modified the stand since some of the pictures were taken, it is now hollow for easy printing

Check out my YouTube Channel (Jimson's Stuff) where I make all sorts of things and also review tech including 3D printers.
