Summary

Another cardboard spool adapter for the Bambu Lab X1 AMS system. Designed for Overture PLA cardboard spools. UPDATE V2

Tags: [bambu](#) [bambulab](#) [cardboard](#) [spool](#)

UPDATE!: I have revised the original Overture Spool Adapter based on feedback and experience after creating my Polymaker Spool Adapter.

Version 2 of the spool adapter works just like the original except, I have added the small retention tabs to the edges for a complete grip on the cardboard edge. This should eliminate the need to glue or tape the spool adapter to the cardboard spool. No more glue! Yeah. This also makes them reusable from spool to spool.

I also started printing the spool adapters as new colors arrive. I print an adapter with the same color to match the filament on the spool. Looks nice!

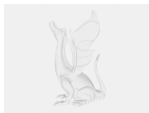

Please let me know what you think in the comments.

Thanks,
James
