Summary

May be the simplest business card holder you can make, purposely modelled to be printed in vase-mode.

[Household](#) > [Office](#)

Tags: [business](#) [businesscard](#) [businesscardholder](#) [vasemode](#)

Purposely modelled from the get-go to be printed in vase mode, simple, quick, easy, and functioning perfectly.

Recommended print settings are shown in one of the model's photo with a 0.8mm nozzle, however I do also recommend to put zero bottom layers.
