I wasn't happy with the solutions out there. Got some Inspiration from the "Ultimate Printer Knob", which was just to big for my setup and wasn't sitting right on the **prusa mini**.

Therefore I went out to make my own knob:

- There is a recess in the middle for making you click in the middle of the knob, so you are less likely to turn unintentionally when clicking
- It never covers your screen of the prusa mini
- It is small enough to rotate when the display is in a more upright position (see pictures)

- The hole for fast scrolling is closed and round, which is just aesthetically more pleasing and works better in this small size.

Now it is the best knob for me and my setup! I hope it serves you too.
