### Summary

These are the 2 missing motorbox files for the astfaellergerald 62cm windgenerator.

[Household](#) > [Outdoor & Garden](#)

Tags: [windgenerator](#) [windmill](#)

astfaellergerald uploaded a nice windgenerator on printables. It was missing 2 stl that holds the nema17 motor.

I extracted and uploaded the 2 missing files on request of another user. The mounting holes for the Nema motor are a bit off, but with some sanding (making the holes bigger) it's okay.

I'm busy with buiding this generator now. It will not bring much power (a NEMA-17 12V-2A will generate in optimal condition about 20 Watt), but it will be my first steps into windgeneration. :-)

Thanks again astfaellergerald for uploading this windgenerator.
