Summary

This simple adapter allows you to more safely use PrintaLot spools (75mm internal bore) on Ender based spool holders.

A simple spool adapter for PrintaLot spools (75mm ID) that allows you to quickly place two of them onto any standard Ender-type spool holder to safely print with these bigger bore spools.

Without these bushing/adapters the spool is unsafely held and tends to wobble a lot.

You'll have to print two of these, one is always held at the back of the spool holder, the other you remove and replace with the spools.

If you run different brands of filament sometimes it doesn't make sense to change your entire holder just for the one brand, so these adapters are very handy.

I've printed a set out of PETG and PLA but it doesn't matter you could print them out of anything you have laying around these are not physically demanding parts.

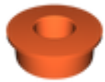

PrintaLot are a brand of filaments manufactured in Argentina.

Model files

printalot_spool_adapter_ender.stl

☐ Regular design, prints slower than the simple model but looks nicer.

printalot_spool_adapter_ender_simple.stl

☐ Simple version for the fastest print times. No nonsense version.
