Summary

Designed to remove some of the steering slop.

Tags: [tamiya](#) [tamiyatt02](#) [tt02](#)

This bolts on over the front end of the steering rack on the TT02 and takes out some of the side to side slop. The stock screws you remove to fit this are too short, you'll need ones somewhere around 15-16mm. When I finished my TT02 build I had a pair of them unused that fit perfectly, so check your leftover parts.
