(not so) To scale model of the real life building for "Los Pollos Hermanos" from Breaking Bad. Made in blender, printed at 0.20mm layer height with 10% infill. In total, it took about 20 hours to print everything.

Notes:

LPH\_Full.stl has everything placed in the correct position, so you can print it in one go.

LPH\_Building is just the building, without the AC or Trash. I recommend supports under the signs on each 3 sides, but the indents in the front with the doors can bridge fairly easily.

LPH\_Sidewalk is the sidewalk that goes under the building. I recommend printing with ironing on the top layer only, for a smooth finish. You might

also need to scale it up 1-2% to make it fit, as the file is straight from blender without modification.

LPH\_Trash/AirCondition.stl are optional additions to the scene. Use LPH\_Full for a reference on where to place them.
