### Summary

Looks really nice and very noticeable on your tires.

I remixed this because I didn't feel like a fff or fdm printed object would be up to holding air in as much as a nylon cap would so I cut out the threads so you can glue in a cheap valve cap. It's remixed from someone on Tinkercad **ToaKame "Celtic skull valve cap"** and **artec3d "Celtic skull"**. ( Sorry 'bout the rusty rims, but hey, at least the valve caps look good. )

- .4 mm nozzle
- .15 mm layer height
- 30% infill
- 4 walls sides, top, and bottom
- glue in cheap nylon valve cap with E6000
