Summary

This is a small bumpy vase, not much more to say.

[Art & Design](#) > [Sculptures](#)

Print this is vase mode to make it just the outline. I printed it with 0.2 mm layer height and 4 bottom layers.

Like most 3D printed vases, this can't hold water. You can make it hold water by maybe lining a piece of plastic on the inside though.

I added a hexagon and pentagon version. Use which one you like more.

Both of the vases take about 50 minutes to print.

In the picture I printed the vases with PolyTerra PLA Watermelon
