updated 12. 10. 2022 | published 12. 10. 2022

### Summary

My current retro corner configuration and my OCD forced me to learn a basic move in Blender (boolean difference).

This stand looks awesome, but the way the cables hanged in the side of my monitor made my eyes twitch. At first I thought I could just mirror the model but I had to cut the hole for the reset button, I did my best with my limited Blender experience.

I think some of you might enjoy the possibility of placing the PSX on the other side.

I added another version of the stl with higher walls for better aesthetics.

I will upload pics when it's printed.

Follow me on Twitter for music and retrogaming scene updates.
