I just tried my hand at making some fermented hot sauces in a mason jar with an air lock. I don't have a good enclosed space for them, so they will live on my counter. I quickly made these covers for the jars to keep UV light off them during the fermenting process.

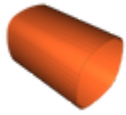

These are a snug fit on a Ball brand 64oz mason jar. Might fit other jars, but can't say for certain. Inner clearance is 92mm across and 107mm diagonally.

Designed to be printed in Vase mode for a fast inexpensive print.
