Original Design: **Nintendo Switch Dock Front Panel Retrofit by amazingyen**

Here are some of the redesigns I did to this:

- Added 2 Screw Mounts (The official dock front panel has 6 posts)
- Added support for screw mounts for more durability when installing
- Changed Screw hole size to 2.2mm (Original was too small and snapped the posts off the body)
- Decreased wall size around LED circuit and LED defuser (Original was too snug when installing)

I'm using Cura to Slice with a 0.2-0.5mm layer height and 1.8mm Wall thickness. I would recommend using Z-Hop, when the hotend was traveling it would knock the posts off the body.
