A simple phone holder for the CM800 Microscope, prints in one piece and is applied to an extra phone back plate with Gorilla tape (Or thin foam two sided hobby tape would do) ensuring that the camera looks through the square hole. This was designed because I wouldn't need to source screws and springs just for a microscope phone mount. It works fairly well for such a quick print, also it should work on any microscopes that use the same eyepiece, maybe other scopes by Celestron labs.

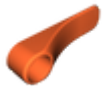

Fit is intended to be loose.

Post-Printing

Photo taken with mount of course.
