Dust protection caps for some of the common connections on SCUBA diving equipment and hoses:

- LP inflator stud (like the one on most BCD low pressure inflators);
- second state thread (like the one on second stage regulators);
- second stage hose stud (like the one on the hoses that connect to a second stage regulator).

These are not meant to be water tight, so do not immerse the parts with the caps on and expect them to not get flooded.

Print in TPU to get the flexibility required to get it on and off.
