This nameplate is a gift for a friend. He has several old Volvo BM tractors.

After I found a picture online of the logo. I cleaned it up and converted it to svg. (with inkscape) The imported it into freecad and extruded the logo. I had to 'subtract' some extrusions from others, like the O's in Volvo. But it worked out fine, since I am not very experienced with Freecad.

The plate is made in the colors I could find and match. I used the color change option in Prusa slicer. It worked out really well.
