Twisted Vase.

(Vase Mode)

Designed in Fusion 360. using loft and path of twist, I created a Vase.

Used 1.0mm nozzle.

Can be tricky to set up vase mode, took 2 attempts.(never done it before!)

Please look at preview of print, as the first attempt was missing half of the vase.

Might do a few more, but I only need so many vases!

Only took about 3-3.5 hrs to print!

Print Settings

Printer Brand:

Crealitiy

Printer:

Ender 3

Rafts:

No

Supports:

No

Resolution:

1.00mm

Filament:

PolyMaker PLA

I used Transparent but it does not matter.

Notes:

I should have left the filament in the dehydrator a bit longer to get a smoother finish.

Seems to happen a bit with the transparent filament.
