The iPad Pro can make a great second screen for your MacBook Pro especially with Luna Display or the new Sidecar feature. Even without these it can be useful to have some additional real estate for podcasts, research, etc. I like to view Octoprint on the iPad and listen to music while I work on the laptop. With these connectors you can quickly attach or detach your iPad Pro 11" to your MacBook Pro.

My work is all free forever. If you want to support my habit you can keep me caffeinated.

Print instructions

Bottom connector requires supports.

I uploaded a file with the standard Prusa PETG 0.2mm Quality parameters. This gives a great print.

I have tested this at 0.25mm and 200% feed. The print was very fast and maintained a good quality.
