I made this one to be used on my Goathland/Hogsmeade module (you can find all 3d parts for it here: <https://www.printables.com/model/270250-hogsmeade-goathland-station-oo-gauge-176-harry-pot> )

But can be used anywhere you want.

For the crane arm, print it flat  
The mast is printed upright  
as is the counter weight  
For the catcher thing, it prints bottoms up

If you have a resin printer just use the SLA file to get the crane in one bit.

PS: i might add the little hand crank post in the future, but it's really too small for my FDM printer to make it. if you wish to have it please comment / contact me.
