This adaptor plate allows you to mount an EK-Quantum Kinetic TBE 200 D5 (or similar) PC Water Cooling pump to the removable bar of NZXT's cases that have the vertical cable management bar.

As seen in the picture, this allows the pump/res combo to appear floating and be perfectly centered with the cable management bar.

It held up in my PC for over a year now, printed in PETG, without issues so far.

I remember slightly moving one of the holes, but I am pretty sure the current design is correct. Let me know if there are any issues.
