### Summary

I bought the Parkside Cordless Screwdriver (PASD 4 B2) and it only came in the small case. Time to fix that :)

Not much to say really, I just want to have my tools in an easy to reach place so I hotglued it to the side of my 19" rack case. There are also 2 holes for screws built-in but I didn't need them.

The screwdrivers bits click in place.

You do have to print with supports, I printed in orientation as placed already because the supports just fall off. I printed with PETG with 4 perimeters and 20% grid infill.
