I had a small tool pouch just laying around collecting dust, and I wanted to find somewhere to put it were it could still be used on a regular bases. luckily there was a nice and open spot on my pegboard for it to live, so there it went with the help of a wood dowel.

. Do to the differences in tool pouch sizes I recommend using a dowel/rod that is under 12mm in diameter to fit your bags length

.Since it's 2 separate pegs it can be as wide as you want to accommodate a variety of tool pouch sizes

. If you don't plan on leaving the bag up on the pegboard there's a open version for said occasions
