Summary

parts for the Panasonic-Q GameCube to replace your broken ones (L+R Rail & Tray).

[Gadgets](#) > [Video Games](#)

Completely built from scratch based on the original parts, as I had found the ones available don't quite perfectly fitted on my Q.

I included the Tray as seperate parts, as well as a full version - you obviously only need one.

Additionally, there's a GlueGuide as well, which helps you align the 2 seperately printed pieces perfectly when glueing them together (I had honestly thrown out a few because I messed the glue part up, hahaha).

When all printed and installed, don't forget to lube it properly to ensure a smooth movement.

I highly suggest "Molykote EM-30L" for this, or "SuperLube" (with PTFE).

This took me a **LONG** time to developed and test/print. If you find these (or any of my other designs) useful, you can always leave me a tip to help develop more like this in the future!
