updated 9. 10. 2022 | published 9. 10. 2022

Summary

Rebuilt in Fusion 360 from basic bodies, so it's easier to extend without having to mess with meshes.

Rebuilt in Fusion 360 from basic bodies, so it's easier to extend!

It is easy to build your perfect [soap/tool/toy/brush/headphone/etc] holder right in Fusion 360 without messing with meshes. It fits very well, snaps in with a nice **click** and is removable from the sucker hook without too much strength.
