updated 10. 10. 2022 | published 10. 10. 2022

### Summary

Cap goes on the end of a EMT electrical conduit to protect wires inside from getting skinned on the sharp metal edge.

---

Built this for my personal use to keep cables I run in the chase way in my house from getting scraped up. It has a good friction fit so it won't pull off if you pull against it the wrong way. If you want it to be completely permanent, put a bit of caulk in the groove before you press it on. Printed in PETg. No guarantee this is to code or suitable for your purpose.
