Summary

Got 20mm PVC pipe? Make a spoolholder!

Tags: [spoolholder](#)

I super liked the shape of the original spool holder, but wanted to use the 20mm PVC pipe that I had laying around, so I just took the base of that spool holder and cut out a hole to press fit the 20mm tube into. Works great, is stable and easy and fast to print. Plus it still looks pretty nice.

With the connector you can obviously connect spoolholder together by putting them inside the 20mm tubes. I use it to have a stable but detachable filament bank for the MMU2S.
