3/27/20 - The Looney model is a time and material saver. Made by CapeCodMakers society via Mike Looney. The original is included but we also created scaled versions for mm. Transparency sheets are 3 hole punched and match up with the headband. I made some gcodes for those with monoprice mini v2 machines inside the Looney folder. The 2 part model glues together easily with one lapped seam and an optional ziptie in the middle. If you have an oddball machine you can always adjust the scale and make sure that 3 hole punched sheet fits the pegs...that is the most important part. The original STL file is available in split version and full version for all sizes of machines.

What the Looney model looks like when printed (this one in 2 halves):
